

Project Demonstration and Code Review Guide

Preparation

- Install UQ's [Zoom](#) software. While the Project Demonstration and Code Review is in person (secure assessment), you will need to share your screen for recording. The recording is for moderation purposes. You don't need to share your camera. Only the screen and audio are recorded.
- Book your timeslot. Various timeslots are available across Week 12. Custom projects will need to book with either Aneesha, Kailash or Ben. If you can't find a timeslot that works for you given work and study commitments, please email the Course Coordinator to arrange another timeslot for you in Week 12. An extension to do the Code Review in Week 13 is required. Some timeslots of 2 Demonstrators assigned for moderation and calibration purposes.
- Please make sure you have a valid UQ Student ID. You will need to show your Student ID as this is a verified assessment item.
- Review the Course Profile Assessment Item, Course Hurdle requirements from the Course Profile, Table 2 from the specification and the Code Review Rubric.

Note:

- The you will need to show and discuss your project in a Code Editor.
- The use of AI-enabled code assistants, searching the code-base or web, or machine translation tools during the review is not allowed.
- The Code Review (8 Marks) and the Exam (36 Marks) must be collectively passed to pass the course hurdle (i.e., 22/44).
- Your project should be deployed to either UQ Cloud Zone or an alternate cloud platform. If you have not deployed you can demo locally on your laptop after downloading your submitted code. If you have not deployed you will lose marks for 1.1 in Table 2 from the Specification.
- Review your code and project workflow before attending your session. You will need to understand how routes (urls.py), models, views and templates all link together, where you have implemented sections of code and be able to describe the logic and processing that you have implemented. Know Django (or Next.js) conventions and naming so that you can understand and answer questions.
 - Be prepared to edit a small element in the site.
 - When explaining your code, you need to navigate to the file and show the location of the code and describe how it works.
 - You can ask follow up clarification questions and for the question to be repeated.

Demonstration and Code Review

- Arrive 5-10 minutes before your timeslot. Check the room in the booking spreadsheet as not all timeslots are in 77-116.
- Only students demonstrating in a timeslot will be allowed in the room. Please wait to be called in by your Marking Demonstrator.
- You will be required to share your screen in Zoom and show the Demonstrator your Student ID.
- The Marking Demonstrator will guide you through demonstrating the required functionality. They will be marking the rubric while you demonstrate each feature.
- For the Code Review, you will be asked 3 questions with some follow-on questions. A pool of questions is used by the Markers to ensure questions at the correct level are asked. The pool contains questions for different web frameworks (Django, Next.js or React and RESTful API).
 - You are allowed to ask for the question to be repeated or broken down further to help you understand.
 - If you have deployed to the Cloud and changes can't easily be updated, the demonstrator will review the code and verify that they think the correct location is updated.
 - In the first question you will be asked to make a small edit (e.g., Edit the title of a page, change the text on a button or add a prefix to text displayed on the page, etc). The edit required will be simple and not intentionally result in breaking your site. You should however know your code and where to edit different sections.
 - You will also be asked 1 intermediate and 1 advanced question.
